

$M$  - a 4D manifold

$$\text{The action } \exp\left(-\lambda \int_M \text{tr}(B^A F_A)\right)$$

where  $F = F_A$  is the curvature of a connection  $A$  and  $B$  is a Lie-valued 2-form.

The first (classical) observable we want to consider is

$$\text{Tr}_\rho \exp\left(\int_\Sigma \text{Hol}(A, \gamma_{y,x}) B(y) \text{Hol}(A, \gamma_{z,y})\right), \quad y \in \Sigma.$$
