

The Short-Tail Quotient

February-22-11
10:19 AM

Set  = 0. What have we left?

$$\begin{array}{c} \swarrow \\ \downarrow \\ \downarrow \\ \searrow \end{array} = \begin{array}{c} \downarrow \\ \downarrow \end{array} \rightarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} + \begin{array}{c} \downarrow \\ \downarrow \end{array} \leftarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} - \begin{array}{c} \swarrow \searrow \\ \swarrow \searrow \end{array} - \begin{array}{c} \swarrow \searrow \\ \swarrow \searrow \end{array}$$

⇓

$$0 = \begin{array}{c} \downarrow \\ \downarrow \end{array} \leftarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} + \begin{array}{c} \downarrow \\ \downarrow \end{array} \rightarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} - \text{likewise} \\ \text{X's.}$$

Alternatively,

$$\begin{array}{c} \downarrow \\ \downarrow \end{array} \rightarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} + \begin{array}{c} \downarrow \\ \downarrow \end{array} \leftarrow \begin{array}{c} \downarrow \\ \downarrow \end{array} = \begin{array}{c} \downarrow \rightarrow \\ \downarrow \leftarrow \end{array} + \begin{array}{c} \downarrow \leftarrow \\ \downarrow \rightarrow \end{array}$$
