

## Meta-group cocycles

January-15-13  
8:12 AM

$$\begin{aligned} m_1^{(2)}: (g_1, g_2, w) &\mapsto (g_1 g_2, w + j(g_1)) \\ (g_1, g_2, g_3, w) &\mapsto (g_1 g_2, g_3, w + j(g_1)) \mapsto (g_1 g_2 g_3, w + j(g_1) + j(g_2)) \\ &\xrightarrow{(g_1, g_2, g_3) w + j(g_1)} (g_1 g_2 g_3, w + j(g_1) + j(g_2)) \\ j(g_1, g_2) - j(g_1, g_2, g_3) + j(g_1, g_2, g_3) - j(g_2, g_3) &= 0 \end{aligned}$$

Group cocycle:  $M$  - a  $G$ -module, meaning

$$(gh)m = g(hm)$$

$$j: G \rightarrow M \text{ with } j(gh) = j(g) + gj(h)$$

makes  $G \times M$  into a group with

$$(g, m) \cdot (h, n) := (gh, m + gh)$$

Meta-group cocycle:
