

Monday-11 AKT on 140324: Bi-algebras and Milnor-Moore, tangles

March-15-14 4:49 PM

HW7 returned. HW8 due. HW9 on web.

Last time: Given g , $Wg : \mathbb{A}(1) \rightarrow U(g)$:

\mathbb{A} is a "universal universal enveloping algebra"

Today's goals: The bi-algebra structure, tangles

\mathbb{A} is an algebra and so is U . Is \mathbb{A} a bi-algebra?

1. Define algebra (A, m, ϵ , diagrams)
2. Define co-algebra (C, δ, η , diagrams)
3. Define bi-algebra
4. \mathbb{A} is a bi-algebra

$$\exists \square : \mathbb{A} \rightarrow \mathbb{A} \otimes \mathbb{A} \text{ s.t. } \forall v_1, v_2 \in \mathbb{A}$$

$$W_{v_1, v_2} = m_{\otimes} \circ (W_{v_1} \otimes W_{v_2}) \circ \square_{\mathbb{A}}$$

5. Milnor-Moore & primitives. $\not\exists$ not done.

6. Warning: Given g

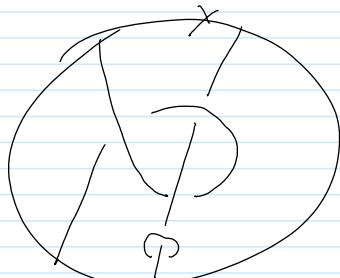

$$(\mathbb{A}, m, \square) \leftrightarrow (U(g), m, \delta)$$

Questions 1. What is Δ in \mathbb{A} language?

2. What is \square in $U(g)$ language?

done line.

Tangles [contain knots]

1. Delete an edge
2. Double an edge
3. Planar algebra

Question What is gray? What's "an expansion"?
