Pensieve header: Non-Commutative Gaussian Elimination - Day 1.

**Today.** Commutative Gaussian elimination, then non-commutative Gaussian elimination (NCGE), then (unlikely) EIWL-10-12, then even less likely, **Patterns**.

Topics (in no particular order). Whatever you may suggest; whatever comes to my mind; the Fibonacci-numbers; the Catalan numbers; the Jones polynomial; a more efficient Jones algorithm; a riddle onspheres; Khovanov homology; Γ-calculus; the Hopf fibration; Hilbert's 13th problem; non-commutative Gaussian elimination; free Lie algebras; the Baker-Campbell-Hausdorff formula; wacky numbers; an order 4 torus; the Schwarz Lantern; knot colourings; the Temperley-Lieb pairing; the dodecahedral link; sound experiments; barycentric subdivisions; some Peane curves; braid closures and Vogel's algorithm; the insolubility of the quintic; phase portraits; the Mandelbrot set; shadows of the Cantor aerogel; quilt plots; some image transformations; De Bruijn graphs; the Riemann series theorem; finite type invariants and the Willerton fish; the Towers of Hanoi; Hochschild homology of (some) coalgebras; convolutions and image improvements.

# An Image Manipulation Challenge

The image at http://drorbn.net/bbs/show?shot=17-1750-171016-111042.jpg is pathetic. Can you improve it? Whatever you do, should also work well with all other images at http://drorbn.net/bbs/show.php?prefix=17-1750.

## A Graphics Challenge

The torus  $S^1 \times S^1$  has an order 4 symmetry. Can you draw it in such a manner that it will manifest?

# The Cow Problem (Leonard)

A farmer has 19 cows, and she wishes to give them to her daughters to that the first will get 1/2, the second 1/4, and the third 1/5. This is obviously impossible. A wise woman hears of the problem and suggests: "I'll add on one of my cows, so you'll have 20. The first daughter will get 10, the second 5, the third 4, I'll take back the remaining cow, and everyone is happy!".

**Problem.** Are there any other quadruples like (19, 2, 4, 5), for which the same trick will work? What are all of them?

**Hint.** It is sometimes better to analyze and generalize, first.

### Reminders

- Mathematica receipts due Monday November 6, in class.
- Submissions are limited to 20Mb.

#### The Commutative Case

```
vs = Table[(i+j)<sup>5</sup>, {i, 12}, {j, 8}];
vs // Column

{32, 243, 1024, 3125, 7776, 16807, 32768, 59049}
{243, 1024, 3125, 7776, 16807, 32768, 59049, 100000}
{1024, 3125, 7776, 16807, 32768, 59049, 100000, 161051}
{3125, 7776, 16807, 32768, 59049, 100000, 161051, 248832}
{7776, 16807, 32768, 59049, 100000, 161051, 248832, 371293}
{16807, 32768, 59049, 100000, 161051, 248832, 371293, 537824}
{32768, 59049, 100000, 161051, 248832, 371293, 537824, 759375}
{59049, 100000, 161051, 248832, 371293, 537824, 759375, 1048576}
{100000, 161051, 248832, 371293, 537824, 759375, 1048576, 1419857, 1889568, 2476099}
{371293, 537824, 759375, 1048576, 1419857, 1889568, 2476099, 3200000}
```

#### ? Position

Position[expr, pattern] gives a list of the positions at which objects matching pattern appear in expr.

Position[expr, pattern, levelspec] finds only objects that appear on levels specified by levelspec.

Position[expr, pattern, levelspec, n] gives the positions of the first n objects found.

Position[pattern] represents an operator form of Position that can be applied to an expression.  $\gg$ 

#### ? FirstPosition

FirstPosition[expr, pattern] gives the position of the first

element in expr that matches pattern, or Missing["NotFound"] if no such element is found.

FirstPosition[expr, pattern, default] gives default if no element matching pattern is found.

FirstPosition[expr, pattern, default, levelspec] finds only objects that appear on levels specified by levelspec.

FirstPosition[pattern] represents an operator form of FirstPosition that can be applied to an expression. >>

### On to Rubik's Cube

## ? Cycles

Cycles[ $\{cyc_1, cyc_2, ...\}$ ] represents a permutation with disjoint cycles  $cyc_i$ .  $\gg$ 

```
n = 54;
g<sub>1</sub> = Cycles[
    {{1, 18, 45, 28}, {2, 27, 44, 19}, {3, 36, 43, 10}, {46, 52, 54, 48}, {47, 49, 53, 51}}];
g<sub>2</sub> = Cycles[{{7, 16, 39, 30}, {8, 25, 38, 21}, {9, 34, 37, 12},
    {13, 15, 33, 31}, {14, 24, 32, 22}}];
g<sub>3</sub> = Cycles[{{28, 31, 34, 48}, {29, 32, 35, 47}, {30, 33, 36, 46},
    {37, 39, 45, 43}, {38, 42, 44, 40}}];
g<sub>4</sub> = Cycles[{{1, 3, 9, 7}, {2, 6, 8, 4}, {10, 54, 16, 13}, {11, 53, 17, 14}, {12, 52, 18, 15}}];
g<sub>5</sub> = Cycles[
    {{1, 13, 37, 46}, {4, 22, 40, 49}, {7, 31, 43, 52}, {10, 12, 30, 28}, {11, 21, 29, 19}}];
g<sub>6</sub> = Cycles[{{3, 48, 39, 15}, {6, 51, 42, 24}, {9, 54, 45, 33},
    {16, 18, 36, 34}, {17, 27, 35, 25}}];
```

#### ? PermutationProduct

PermutationProduct[a, b, c] gives the product of permutations a, b, c.  $\gg$ 

 $a_{-} \circ b_{-} := PermutationProduct[a, b]$ 

#### ? InversePermutation

InversePermutation[perm] returns the inverse of permutation perm.  $\gg$ 

### ? PermutationSupport

PermutationSupport[perm] returns the support of the permutation perm.  $\gg$ 

### ? PermutationReplace

PermutationReplace[expr, perm] replaces each part in expr by its image under the permutation perm.

PermutationReplace[expr, gr] returns the list of images of expr under all elements of the permutation group  $gr. \gg$
