11:37 AM

How far can we verify quadraticity by computer?

How far can we verify 2-locality by computer?

Is it enough to verify 2-locality modulo some power of I ?

Make a comparison with GPV/BHLR.

Find an algebraic proof of the 2-locality of PB_n , try to immitate it for PV_n .

Possibly use "combing" results of Luis Paris?

Possibly use homological techniques of Polishchuk?
