

I still don't have a good yoga for the AEK procedure (I.e., for $E \rightarrow K$ in the co-commutative case).

The generators of K^w can be written in terms of the generators of K^u (i.e., given Φ , can write a formula for V). With T any classical tangle, esp.  or , consider the "sled" 50

Presumably it can be generalized to "split greens, combine back w/ any two trees, so long as one is atop the other".

"Monoidal" Compositions:

"contractions":
