

petar - if you want this page removed,
of course it can easily be done

"Why do we care" has an even simpler excuse,
with a simple catchphrase:

" $gr_{\mathbb{Z}}K$ is an approximation of K and is
simpler thereof. Quadraticity means that $gr_{\mathbb{Z}}K$
is as simple as it can reasonably be".

Your "why do we care" was to rely on even
more complicated words.

Anyway, too much time spent on that!

Why are there two acknowledgements in your
thesis?

You could have made better use of pictures in
the definition of $PvBn$.

You failed to switch to "20 minutes style", yet
you were saved by the kindness of the chair who
gave you 27 minutes, and by Karen who
asked you to continue. You cannot expect this
at the SFS exam. You ended up speaking 35 mins.

Question. Do v-brands relate to u-brands? Does

The quadraticity of one relates to the quadraticity of the other?

Is there really an exact sequence

$$1 \rightarrow PB_n \rightarrow PVB_n \rightarrow PFB_n \rightarrow 1 \quad ?$$
