

# Brian Sanderson's Pattern Recognition Algorithm

Is the maximum rotation order 1,2,3,4 or 6? Is there a mirror (m)? Is there an indecomposable glide reflection (g)?  
Is there a rotation axis on a mirror? Is there a rotation axis not on a mirror?

Note: Every pattern is identified according to three systems of notation, as in the example below:

442: The [Conway-Thurston](#) notation, as used in my [tilings page](#).

p4: The International Union of Crystallography notation.

S442: The Montesinos notation, as in his book [Classical Tessellations and Three Manifolds](#)
