

To do

April-02-10 10:55 AM

- Issues at http://drorbn.net/AcademicPensieve/2009-06/one/Fock-Quantification_des_varie%27te%27s_amasse%27es.pdf and at http://drorbn.net/AcademicPensieve/2013-10/one/Fukaya-Perturbation_of_constant_maps_String_topology_and_Perturbative_Chern-Simons_Theory.pdf
- Save a few clicks in the sync process.
- Make a "visual index" page.
- See if google will index handwritten pages and text within images.
- Extract and display EXIF comments from images: use Mathematica's "MetalInformation".
- A major re-write of the assembly process is in order.
- Link with my wiki?
- "Delayed" file operations.
- See that "untitled" onenote pages get unique names.
- Generate "OneNote.pdf".

Done.

- Finish the "about" page and move out of beta.
- Make an "Other Files" section in the index files, before "All files".
- Save a few clicks in the assembly process.
- Split "PublicNotebook" into "ByDate" and "ByTheme". (May require some .htaccess play).
- Add a "recently modified PDF files" list to the main index.
- Add enumerators to the .one and the .nb tables.
- Add some stats to the main index.
- Localize the css file.
- Automatic treatment of .lnk files.
- Use copyleft symbols; e.g. <http://www.graphemica.com/%C9%94> or <http://graphemica.com/%E2%86%84>.
- Fix some links to .one files, from deep directories.
- Sortable tables using <http://www.kryogenix.org/code/browser/sortable/>
- MathJax used.
- Add an "HTML/PDF/TXT" sub-header to index files.
- Stamp PDF files.
- Merged "teachers notebooks".

Ideas.

1. Perhaps there should be "Portals", besides classes, Annotations, and Projects?
2. Study WebGL!
