

Katlas work 190209

February 9, 2019 11:33 AM

Upgrading from Ubuntu 12.04 to Ubuntu 14.04: (after many of the steps, "service apache2 restart").

1. In /etc/apache2: mv mods-available/rewrite.load mods-enabled
2. In /etc/apache2/sites-enabled/drornb.net.conf, replace
Order allow,deny
allow from all
With
Require all granted
3. Same in /etc/apache2/sites-enabled/000-katlas.org.conf
4. In /etc/apache2/sites-enabled/drornb.net.conf, add "AllowOverride All" instead of "# AllowOverride None" (to enable .htaccess files).
5. In /etc/apache2/apache2.conf, add "AddType text/html php". (This allows "Multiviews" to recognize php)
