

Q: A soccer match ends with  $(n, n)$ .

How many scoring histories could the game have?  
what if the end result is  $(n, m)$ ?

A:  $\binom{2n}{n}$  and  $\binom{n+m}{n}$

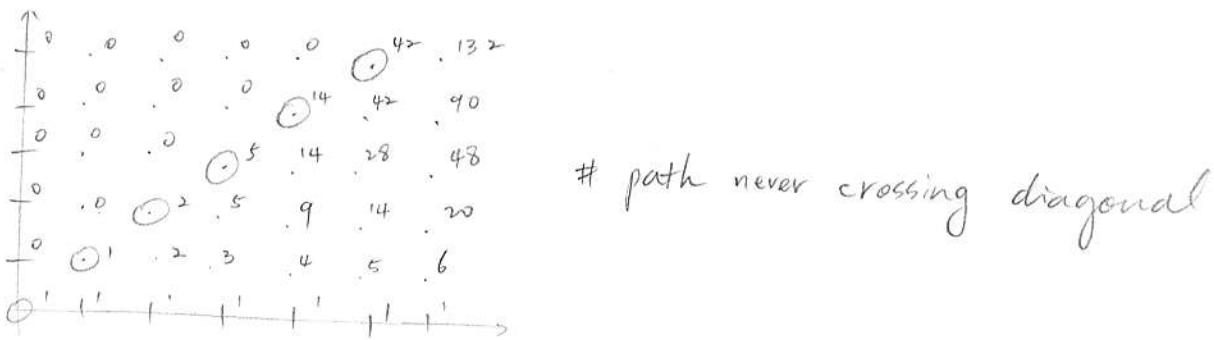

#1

How many such histories if it is known that team c was never behind? Call the answer  $C_n$

<sup>A</sup>  
Catalan

(# of ways to reach  $(n, n)$  so team c is never behind)

$n$	0	1	2	3	4	5
$C_n$	1	1	2	5	14	42

#2

How many seq. of  $n$  a's and  $n$  b's are there such that in every initial seq. the a's are at least as many as the b's? Any part of word made by dropping of word at the end.

if	$n=0$	$\{( )\}$	empty seq.	$\rightarrow$	1
	$n=1$	$\{(ab)\}$		$\rightarrow$	1
	$n=2$	$\{(aabb), (abab)\}$		$\rightarrow$	2
	$n=3$	$\{(aaabb), (aababb), (aabbab), \dots\}$		$\rightarrow$	5

Answer : Catalan.  $C_n$

#3

How many ways are there to compute the product  
 $A_1, A_2, \dots, A_n$  of  $n$  matrices?

if	$n=2$	$A, B$	$\rightarrow$	$(AB)$	$\rightarrow 1$
	$n=3$	$A, B, C$	$\rightarrow$	$(AB)C = A(BC)$	$\rightarrow 2$
	$n=4$	$A, B, C, D$	$\rightarrow$	$((AB)C)D = (ACBC)D = A((BC)D)$ $= A(B(CD)) = (AB)(CD)$	$\rightarrow 5$

Answer :  $C_{n-1}$

why?

Computing  $ABC$

$A$  :  $2 \times 1000$  matrix

$B$  :  $1000 \times 3$  matrix

$C$  :  $3 \times 4$  matrix

$(AB)C$  # operations  $6000 + \text{change}$

$A(BC)$  # operations  $12000 + 8000$

#4

How many ways to cut a convex  $n$ -gon into triangles cutting along only non-crossing diagonals

$\times$  not allowed

$$n=3 \quad \triangle \quad \longrightarrow \quad 1$$

$$n=4 \quad \square \quad \longrightarrow \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \end{matrix} \text{ or } \begin{matrix} \text{---} \\ \diagdown \quad \diagup \end{matrix} \quad 2$$

$$n=5 \quad \text{pentagon} \quad \longrightarrow \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \end{matrix} \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \end{matrix} \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \end{matrix} \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \end{matrix} \quad \begin{matrix} \text{---} \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \end{matrix} \quad 5$$

Answer :  $C_{n-2}$

#5

$\overbrace{\hspace{10em}}$   $2n$  # way to pair them such that pairing chords do not cross

$$n=3 \quad \longrightarrow \quad 5$$
